MULTIMASK PRO (2nd Generation) Face Shield Concept

ENG

e-breathe Multimask Pro

Face Shield

The innovative concept of the e-breathe Multimask Pro is based on a modular developed and ventilated face shield, which can be operated with an air source (powered air-purifying respirator (PAPR) or compressed air). In combination with an air source the Multimask Pro represents a respiratory protection system. The air source builds up a constant overpressure in the head section, which prevents harmful substances from reaching the user.

During development, we took up optimization requests from users and integrated them into a new concept for respiratory protection devices. The result convinces by its functionality and comfort.

The Multimask Pro is designed to serve a wide range of applications. A broad range of matching accessories ensures high functionality and comfort. The lightweight mask frame is the basic unit and is identical for each version. Thus, the mask can be assembled for the respective target application, like in a modular principle, and thus be adapted exactly to the user's needs.

The functional design can do much more than is apparent at first glance:

The upper part of the frame is designed to make it easy to combine the Multimask with other personal protective equipment, such as a standard industrial helmet and/or hearing protectors.

The Multimask is equipped with an anti-fog coated cellulose acetate visor on both sides for a permanently clear view. The visor is characterised by a particularly wide all-round view. Depending on the area of application, different visors are available for the user: temperature, heat or chemical resistant. The shape of the mask frame prevents the mask from being accidentally placed on the visor. The field of vision thus remains protected from unnecessary scratches.

Another advantage of the Multimask is its very easy handling. All mask components such as headgear, visor and face seal can be replaced without tools. The mask can thus be quickly and easily disassembled, cleaned and serviced after use.

In addition, the Multimask also scores in terms of wearing comfort. The face seals ensure a secure and comfortable fit. The new second generation face seals have an improved fit and a click-in system for easier and faster mounting. Different face seals made of different materials are available, which can be individually adapted to the user's needs.

The Multimask Pro combines breathing, face, hearing and head protection all in one.

Multimask 1. Generation

Multimask Pro 2. Generation

Product Characteristics:

Face seal:

- New Click-in system for easier assembly
- New improved fit
- Easy to exchange and wash
- Materials: neoprene, silicone, foam, mesh

Headgear:

- Eccentric screws for an easy exchange of the headband without tools
- Exchangeable headband made of different materials
- Elastic two-point headband made of PP
- One-point headband for attachment to a helmet

Visor:

- Eccentric screws for an easy visor change without tools
- Visors from different materials for different requirements: Cellulose Acetate & Polycarbonate

Exhalation valve:

- Serves as a speech diaphragm and thus facilitates communication
- Discharge of the used breathing air

Breathing air hoses:

- Three different hose types are available to cover every application:
PU - flexible, PU - fixed length, EPDM - fixed length

Compatibility:

- Compatible with a standard industrial helmet
- Compatible with hearing protection

Air sources:

- **Approved with 3 different PAPR:**
 - PM Proflow SC 160
 - PM Proflow EX 160
 - e-breathe e-Flow
- **Approval with compressed air control valve:**
 - e-breathe e-Line

Technical Specifications:

Combinations:	e-breathe e-Flow	PM Proflow 2 SC / EX 160	e-breathe e-Line
Approvals:	CE certified according to EN 12941	CE certified according to EN 12941	CE certified according to EN 12941
Protection class / VdgW:	TH3 / 100	TH3** / 100 & TH2 / 20	3B / 100
Air Performance:	160 - 180 - 200 l/min	160 l/min	160 - 310 l/min
Hose Connection:	Vario & MM	Vario & MM	Vario & MM
Application temperature:	-10°C up to +40°C <70% RH	-10°C up to +40°C <70% RH	-10°C up to +40°C <70% RH

Mask Material:	PCABS	PCABS	PCABS

Fig. Multimask Pro with silicone seal and e-Flow PAPR

** Only the Multimask Pro or the Multimask with silicone, foam, mesh seal has protection class TH3.

e-breathe Multimask Pro

Functions

4 5

e-breathe Multimask Pro

Functions

1 Eccentric Closure

The eccentric fastener fixes the visor by a turning movement and takes up the headband.

The rotary movement presses the visor against the visor seal and thus additionally seals the mask.

The headgear and visor can be replaced quickly and easily without any tools.

2 Hose Connections

The attachment of the breathing air hose to the Multimask is done by the patented click adapter with a simple click.

This avoids twisting of the breathing air hose during assembly. The breathing air hoses are available in three different materials, depending on the application purpose.

3 Internal Air Control

Due to the patented click adapter, the user can determine the path of the filtered air himself.

The air ducts inside the mask frame are positioned with the utmost precision and allow the user to regulate the air supply himself via three positions according to his needs.

By turning the click adapter, the user can determine whether the air should flow from below (1), from above (3) or from both directions (2) simultaneously.

4 Exhalation Valve

The exhalation valve offers the safest way to remove the exhaled air. It prevents a dangerous excess of CO2 and, at the same time, prevents the visor from fogging up.

It is positioned close to the mouth and thus facilitates communication.

5 Click Face Seal

The new second generation face seals have an improved fit and a click-in system for easier and faster installation. The frame of the click face seals is simply pressed into the mask frame.

The new face seals are available in a universal size made of three different materials to allow the mask to be individually adapted to the user's needs.

6 Compatibility

The design of the mask frame is designed to allow the Multimask Pro to be combined with other PPE such as industrial helmets, climbing helmets and hearing protectors.

Please note:
The classification of respiratory protection devices may change during the approval process due to the replacement of system components (face seal, respiratory protection fan, hose, etc.). Therefore please always refer to the latest publications of technical data when assembling respiratory protection components in your decision or contact our technical staff.

e-breathe e-Flow

PAPR

10 11

e-breathe e-Line

Compressed Air Control Valve

With its new e-breathe PAPR-system, e-breathe has developed an absolute all-rounder. Thanks to its innovative and modular concept, the e-Flow belongs to the newest generation of air purifying respirators. The slim housing and ergonomic design enable an easy operation even in confined spaces.

In addition to its universal application, the blower also convinces in terms of technology and equipment. The blower is equipped with the newest technology and offers maximum safety and protection. It features an intelligent 2-step warning system with acoustic and visual signals and vibration, a replaceable lithium-ion battery with quick charge function and an intelligent monitoring system. The integrated colour display allows the user to view all information such as battery status, filter status, flow rate, next service date and blower running time.

The volume flow can be easily and quickly adjusted to 160 l/min, 180 l/min or 200 l/min by pressing a button.

Combined with an e-breathe headpiece or suit, the e-Line CA Regulator is a compressed air assisted breathing system with a continuous airflow. The system protects the user from pollutants such as particles, dust, fumes (aerosols), gases or vapours. It can also be used as an ambient air-independent device in environments where the use of filtered respiratory protection is not possible.

The e-Line Regulator is worn on a belt. The housing impresses with its robust and durable design. It is easy to clean due to its smooth surface and can be operated optimally by left- and right-handed people. It supplies the user with 170 - 280 l/min of breathable air at an operating pressure of 5-7 bar. The integrated warning whistle warns the user with a signal tone of up to 90 DB when the operating pressure falls below the minimum operating pressure/minimum volume flow.

In terms of wearing comfort, the system impresses with an exchangeable silencer, different carrying systems for a wide range of applications and an optional tool connection for the supply of compressed air to a compressed air tool or spray gun. The breathing hose has a DIN round thread and is compatible with all e-breathe/PM head pieces. The freely rotating union nut on the adapter prevents the hose from twisting.

e-Flow: Starter-Pack

The Starter-Pack includes:	Part Number	Image
Blower unit, PAD box, 2x filter cover, battery, charging station and comfort belt
